Digital Literacy Project

Name: Lavanya Patidar
Registration Number:25BAI11607

Course: Digital Literacy

Introduction

In today's time, digital technology has become a very important part of our daily life. Almost everything we do, such as studying, communicating, shopping, and even entertainment, depends on digital devices and the internet. Because of this, it is important for everyone to understand how to use technology properly. This is where digital literacy comes in.

Digital literacy simply means having the knowledge and skills to use digital tools like mobile phones, computers, and the internet in a safe and effective way. It is not only about using devices, but also about understanding how to use them responsibly. Without proper digital literacy, people may face problems like online scams, misinformation, or misuse of technology.

Understanding Digital Literacy

Digital literacy includes many different aspects. One of the most important aspects is online safety. Today, many people use the internet without thinking about security. Sharing personal information, clicking unknown links, or using weak passwords can lead to serious problems like hacking or data theft. So, it is always important to stay alert and protect our personal data.

Another important part is digital communication. People communicate using emails, messaging apps, and social media platforms like WhatsApp, Instagram, etc. While these tools make communication easy and fast, we should also use them carefully. We should avoid using inappropriate language and always respect others while communicating online.

Information literacy is also a key part of digital literacy. There is a huge amount of information available on the internet, but not all of it is correct. Sometimes, false or misleading information spreads very quickly. So, it is important to check whether the information is coming from a reliable source before believing or sharing it.

In addition to this, responsible usage of technology is very important. Technology should be used in a positive and meaningful way. People should avoid spreading fake news, cyberbullying, or wasting too much time on unnecessary content. Instead, technology should be used for learning, improving skills, and gaining knowledge.

Infographic

For this project, I created an infographic to represent the concept of digital literacy in a visual format. The infographic includes important topics such as digital literacy basics, online safety, digital communication, information literacy, and responsible usage.

The purpose of creating this infographic is to make the topic easy to understand. Instead of reading long text, people can quickly understand the key points through visuals and short explanations. This makes learning more interesting and effective.

Conclusion

In conclusion, digital literacy is an essential skill in today's modern world. It is not just about using technology, but about using it in a safe, smart, and responsible way. By understanding digital literacy, people can protect themselves from online risks and use digital tools more effectively.

As technology continues to grow, digital literacy will become even more important in the future. Therefore, everyone should try to improve their digital skills and use technology wisely in their daily life.

Task 2 – Digital Portfolio

Platforms I Chose

For my digital portfolio, I decided to create accounts on GitHub, LinkedIn, and Kaggle. I chose these platforms because they are commonly used by students in the computer science field and are also useful for future career opportunities. On GitHub, I created my profile and added a README file where I briefly introduced myself and mentioned my course and interests. It felt like a good starting point to understand how projects are shared online. On LinkedIn, I completed my basic profile by adding my education details and a short introduction. This helped me understand how a professional profile looks and how people present themselves online. For Kaggle, I created a simple profile and added a short bio. Even though I am just starting, I found it interesting because it is mainly focused on data science and practical learning. How I Plan to Use Them Over the next few years, I plan to use these platforms regularly as I learn new things. I want to upload small projects and practice work on GitHub so that I can track my progress. On LinkedIn, I hope to connect with other students and professionals and slowly build my network. On Kaggle, I would like to explore datasets and try beginner-level tasks when I get more comfortable with programming. Overall, this task gave me a clear idea about the importance of having an online presence. Before this, I had not really thought about maintaining profiles like this, but now I understand how they can help in both learning and future opportunities.

How I Plan to Use Them

Over the next few years, I plan to use these platforms regularly as I learn new things. I want to upload small projects and practice work on GitHub so that I can track my progress. On LinkedIn, I hope to connect with other students and professionals and slowly build my network. On Kaggle, I would like to explore datasets and try beginnerlevel tasks when I get more comfortable with programming. Overall, this task gave me a clear idea about the importance of having an online presence. Before this, I had not really thought about maintaining profiles like this, but now I understand how they can help in both learning and future opportunities.

Task 3 – Explore Coding & Collaboration Platforms

Introduction

In this task, I explored different online platforms that are useful for coding practice and collaboration. As a student, it is important to become familiar with such tools because they play a major role in both academic learning and future career development.

Coding Practice Platform

For the coding practice part, I created an account on HackerRank and attempted a beginner-level problem called “Solve Me First.” At the beginning, I faced a small issue with indentation in Python, but after correcting it, I was able to successfully run and submit the code. This experience helped me understand how coding platforms work, including writing code, testing it, and submitting solutions. Even though the problem was simple, it gave me confidence and a basic idea of problem-solving in an online environment. I also understood how important it is to follow proper syntax and structure while coding.

Google Workspace Collaboration

For the collaboration part, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz consisted of five questions, including both multiple choice and short answer types. The questions were designed to check basic knowledge about online safety, digital responsibility, and the use of technology. I also linked the form to Google Sheets to automatically collect responses. This made it easy to view and analyze the answers in a structured format. Creating the form was simple and helped me understand how surveys and quizzes can be conducted effectively.

Conclusion

Overall, this task gave me a good exposure to both coding and collaboration platforms. I believe these tools will be very helpful throughout my academic journey and will also support me in building important skills for the future.

Task 4 – Email & Etiquette

Introduction

In today's digital world, communication mostly happens through emails, messages, and online platforms. Because of this, maintaining proper communication etiquette has become very important, especially for students interacting with professors or professionals.

Situation of Poor Communication

A common situation where poor digital communication creates problems is when a student sends an email without following proper format or etiquette. For example, a student might send an email to a professor without a subject line, greeting, or proper structure. Sometimes, the tone may also be too casual or unclear. In such cases, the message may be ignored or misunderstood. The professor may not take the request seriously, which can lead to delays or missed opportunities for the student

What Went Wrong

The main issue in this situation is the lack of professionalism. Missing important elements like a clear subject line, respectful greeting, and well-organized content makes the email look careless. Using informal language can also give a negative impression about the student's attitude.

Conclusion

Overall, proper digital communication plays a key role in academic and professional success. By following basic etiquette, students can avoid misunderstandings and create a positive impression in formal interactions.

Task 5 – Cybercrime Awareness

Introduction

While working on this task, I got an opportunity to learn more about cybercrimes, especially UPI and online payment frauds, which are very common today. As a student who regularly uses digital payment apps, this topic felt very relevant and practical.

What Surprised Me the Most

One thing that really surprised me during this research was how simple these scams actually are. I initially believed that cybercrimes required advanced technical knowledge, but in reality, most frauds depend on human mistakes. Fraudsters mainly use tricks like creating panic, urgency, or trust to manipulate people.

It was also surprising to see how even educated people fall victim to such scams just because they act quickly without verifying information.

Understanding the Risk

This task made me realize that cybercrime is not only about hacking systems, but also about understanding human behaviour. A small mistake like clicking a wrong link or entering a UPI PIN at the wrong time can lead to serious financial loss. This shows how important awareness and careful thinking are while using digital platforms.

Personal Change in Habit

After learning about these risks, I have decided to change one important habit. I will be more careful while making online payments and will always double-check before approving any request. I will also avoid responding to unknown calls or messages related to banking or transactions.

Conclusion

Overall, this task helped me understand the importance of staying alert in the digital world. Cyber safety is not just about technology, but also about awareness and responsible behaviour. By following simple precautions, we can protect ourselves and others from online threats.
